DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 3 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Both claims contain 2 sentences, which run contrary to U.S Patent Practice. Subject matter claimed must be presented in a single sentence. Here, it is not clear whether the first sentence or the second sentence is the subject matter claimed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by JP 2003-238544 ('544). The '544 JP patent discloses a method for the manufacture of an epoxide from olefins using hydrogen peroxide in the presence of a catalytic composition. The catalyst comprises a tungsten oxide solution, trisodium monophosphate (which is the sodium salt of phosphoric acid), trioctylmethylammonium hydrogensulfate in toluene. See Examples. Note that the combination of a quaternary ammonium salt and a hydrogen sulfate salt in solution

Art Unit: 1621

(instant claim 1) is essentially the same as the trioctylmethylammonium hydrogensulfate salt in solution. Thus, the claims are anticipated.

6. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by JP 2003-231680 ('680). The '544 JP patent discloses a method for the manufacture of an epoxide from olefins using hydrogen peroxide in the presence of a catalytic composition. The catalyst comprises a tungsten oxide solution, sodium-borate solution (which consist of boric acid and sodium hydroxide), trioctylmethylammonium hydrogensulfate and toluene. See Examples. Note that the combination of a quaternary ammonium salt and a hydrogen sulfate salt in solution (instant claim 1) is essentially the same as the trioctylmethylammonium hydrogensulfate salt in solution. Thus, the claims are anticipated.
